GARDEN LILIES [GL.]

\$ 2.00 / bulb: see price on the individual package

These are excellent garden lilies- vigorous stems, brilliant colours. Great for the beginner gardener or to fill that empty space in the border.

Some bulbs may be available in specific colours others are being offered as "Surprises" as their colour, height, or orientation are unknown

LILY CULTURE TIPS

Lilies do best in full sun. Some will manage with filtered light or partial shade (minimum 6 hours good sunlight).
 Martagons tolerate some shade very well.

Plant as soon as bulbs arrive. Store bulbs in a cool place if they can't be planted immediately.

Plant bulbs in well drained soil, 6"-8" deep or twice the height of the bulbs (plant deeper in sandy soil; less deep in heavy soil). Mix bulb fertilizer into soil at the bottom of the hole. Water the well after planting.

Deep planting promotes stem rooting and protects against extreme weather in winter and spring.

A 2"layer of mulch helps to get bulbs established; helps to prevent bulbs from heaving in winter and keeps soil moist and cool in summer. Mulching is important when planting Div. VI (trumpets 7 Aurelians), VII (orientals), and some VIII lilies – OTs, AA. LO, TL's OA's.
